

Automotive Corrosion Symposium

April 11 – April 12, 2024 • Detroit, MI, United States

Corrosion is a concern within the automotive industry, not only in the form of cosmetic corrosion resistance from a consumer aesthetics perspective, but also for its potential to affect functionality, reliability, and the safety of road vehicles. This concern is heightened in light of increasingly stringent emission standards that are driving the industry toward high strength lighter weight materials with significantly different corrosion properties and the potential for mixed metal interactions.

The Automotive Corrosion Symposium seeks to draw industry experts from automotive OEMs, material suppliers, paint supplies and Tier 1 suppliers to foster communication within the automotive industry and address industry wide corrosion issues.

Accommodations & Registration

The event will take place at the Courtyard Detroit Downtown, 333 East Jefferson Ave, Detroit, MI 48226. Registration is not yet open.

For more information, visit autocorrosion.swri.org for details as they emerge, email AutomotiveCorrosion@swri.org or call Symposium Chair Jim Dante at +1-210-522-5458.

Call for Abstracts

The Theme of 2024 symposium is "Applied Corrosion Science for Next-Gen Vehicles." We will begin soliciting abstracts for presentations related to a variety of automotive corrosion concerns in the near future.
