

# CESM

## AROUND THE WORLD

Canadian Navy since **1980**

**300+** applications worldwide

U.S. Navy since **1951**

U.K. Royal Navy since **2002**

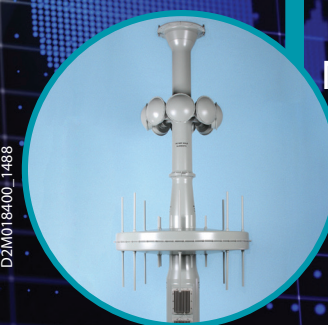

Allied European Navies

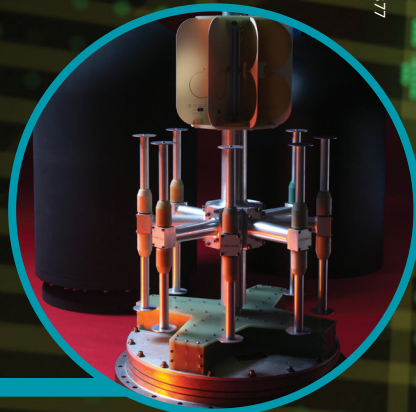

**70+** years of CESM experience

Royal Australian Navy since **2010**

**>200** maritime applications

For more than 70 years, SwRI has worked in the Communications Electronic Support Measures (CESM) arena. Using signals intelligence, antennas and software, SwRI helps U.S. and allied militaries gather communications intelligence and develop electromagnetic techniques to thwart adversarial operations. CESM specialists develop electronic warfare techniques and technology to control the electromagnetic spectrum and deny advantages to an opponent, while ensuring friendly dominance of the spectrum. Around the world, SwRI specializes in gathering intelligence to identify signals of military interest and to detect, intercept, identify, locate, record and/or analyze the RF spectrum for immediate threat recognition or longer-term operational planning.
