SELLER ENVIRONMENTAL AND SAFETY GUIDELINES

Stop Work Authority

Buyer reserves authority to stop work activities on SwRI premises when an unsafe condition or behavior may jeopardize workplace safety and/or cause potential incidents.

Emergency Response/Spills

In the event of a medical emergency, fire, chemical/fuel spill or other hazardous condition, Seller must immediately notify Buyer's Security Department by calling **210-522-2222** to initiate a response from Buyer's personnel and emergency responders, if appropriate. A "spill" is defined as an abnormal release of a substance that could possibly cause an adverse effect on the environment or people in the general area. When a spill occurs, Seller must report the location, identity, and amount of spilled material (if known) and if there are immediate environmental or safety hazards (e.g., exposed personnel, fire or material entering sewers). If the spill is of a reportable quantity, then Buyer must notify governmental officials within 24 hours.

SAFETY REQUIREMENTS

Buyer's Environmental and Safety Systems Department ("ESS")

Phone: 210-522-2221 Email: environmental.safety@swri.org

Seller must comply with all applicable federal, state, and local safety and human health regulations. To ensure thorough communication when planning on site work, Seller should coordinate with their designated Buyer point of contact ("POC"), as specified on the Purchase Order.

Traffic Control

Where traffic diversion is necessary, Seller must provide appropriate signage and coordinate with Buyer's Security Department through the POC. Barricades and/or warning devices that alert others of construction hazards must be used to control traffic, both vehicular and pedestrian, safely through or around the work site. Yellow caution tape and/or cones are appropriate for temporary use (<48 hrs) or in an emergency.

At no time shall a Seller or its employees override any locks or tags encountered during the performance of work. Seller shall develop, implement and maintain a Lockout/Tagout program in accordance with OSHA regulations, use their own locks and keys, and make such program available for examination upon request by Buyer. Before beginning any hot work, Seller must develop, implement and maintain its own Hot Work Program in accordance with OSHA regulations. Seller must use a hot work permit for each separate work activity and must ensure that the conditions of the permit are met at all times. The hot work area is the space surrounding a hot work site (often defined by the 35 feet or 10 meter rule) defined by the horizontal and vertical reach of hot work ignition sources. Within this area, combustible, ignitable and flammable materials are temporarily removed or isolated.

Asbestos and Suspect Asbestos Containing Materials

Some Buyer buildings contain asbestos in various forms. Before starting work in any building Seller shall consult with the POC and Facilities who will arrange for the known asbestos information to be provided to Seller. It is possible that asbestos may be found which is not in the survey. Seller upon encountering any asbestos shall cease all operations and notify the POC and Facilities for necessary action.

Radiation Safety

Before transporting any source of radioactive material, X-ray device, or radiographic imaging service on to SwRI premises, Seller shall coordinate with the POC to obtain prior approval from the SwRI Radiation Safety Officer (RSO). SwRI RSO can be reached at (210) 522-2221.

Seller shall provide at least 24-hour advance notice to the POC and Facilities before Seller personnel will be working in a confined space on Buyer's property.

Compressed Gasses

Should the leaking contents of the cylinder present a fire or health hazard, evacuate the area, notify others nearby, and contact Security (210) 522-2222. All cylinders belonging to Seller must be removed from Buyer property when Seller's work is complete.

Mobile Cranes

Each crane, rigging, or hoist brought onto Buyer's property must have an annual inspection performed by a certified testing agency. Documentation, including a logbook and lift plan, must be provided to Buyer upon request. Crane operators must possess a valid National Commission for the Certification of Crane Operators License or equivalent, which is kept at the work site. Seller must ensure that the crane, swing radius, and load path is properly barricaded to prevent personnel from being injured by the crane or load. Lifts must not be made above staff, visitors, other Sellers, or the public. Lifts over occupied facilities may only be made after consultation with and approval by the POC, Facilities and ESS.

Trenching and Excavations

Seller must follow the OSHA standard for trenching and excavation. Seller must coordinate with the POC to notify Facilities prior to any excavation work, driving of spikes/stakes into the ground, or drilling to confirm that utility locations have been determined and demarcated. The excavator will use non-mechanical means (hand-digging) when digging within 18 inches of a marked underground utility. Utilities must be supported within an excavation to prevent collapse. Adjacent structures must be shored and/or protected in accordance with the design documents to prevent collapse. Fall protection should be installed around the perimeter of the excavation.

ENVIRONMENTAL REQUIREMENTS

2. Liquid and solid industrial / hazardous waste; and
3. Wastewater.

Secondary containment must consist of sealed concrete, welded metal containers, or preformed chemical-resistant plastic containers designed for chemical containment. Seller should consider covering containments to prevent rain/sleet and debris from accumulating.

Equipment

All equipment must be maintained in good working order and checked for fluid leaks prior to operation on each shift. All leaks found must be repaired prior to utilizing the equipment. Measures must be taken to ensure spills are prevented during fueling operations. Oil changes must be completed in a manner in which the oil is drained into a containment pan located inside a containment area.

Refrigerant Systems

Seller must coordinate with the POC to coordinate with Buyer's Heating, Ventilation, and Air Conditioning section within the Facility prior to commencing work on any refrigerant-containing system(s) or equipment. Contact (210) 522-2106 for more information.

The Seller shall develop or have their own Hazard Communication Plan that complies with 29 CFR 1910.1200. The Seller shall have copies of Safety Data Sheets (SDS) on-site and available for review for all hazardous materials stored or used on Buyer's property. The Seller may request and review SDSs for any materials that they may encounter on Buyer's property during the performance of work.

The volume of chemicals brought on-site must be strictly limited to what is needed for immediate use. Deliveries should be coordinated by Seller "just in time" for use to avoid prolonged storage periods. Seller must remove all unused raw materials and empty containers from the work site prior to vacating.

Waste Management/Disposal

Seller must adhere to federal, state, and local environmental regulatory requirements, as well as Buyer rules and policies, regarding waste management and disposal. Disposal requirements may be decided prior to commencement of work, depending on the job scope. It is Seller's responsibility to provide advanced notice of the amount, type, and timing of hazardous and Class I nonhazardous waste generation by coordinating with the POC as these must be properly manifested offsite by designated staff in ESS.

Seller must ensure waste is segregated into the following categories and manage the waste accordingly:

- Hazardous (e.g., fuels, acids, aerosol cans)
- Universal (e.g., light bulbs, batteries, paint/paint related waste)
- Class I Nonhazardous (e.g., contaminated soils)
- Class II Nonhazardous (e.g., general trash)

In addition, Seller must comply with the following unacceptable practices that are prohibited by the State of Texas:

- No direct connection between Buyer's water supply and a potential source of contamination is permitted. Potential sources of contamination must be isolated from the public water system by an air-gap or an appropriate backflow prevention device.

SOUTHWEST RESEARCH INSTITUTE

- No cross-connection between the public drinking water supply and a private water system is permitted. These potential threats to the public drinking water supply must be eliminated at the service connection by the installation of an air-gap or a reduced pressure-zone backflow prevention device.
- No connection which allows water to be returned to the public drinking water supply is permitted.
- No pipe or pipe fitting which contains more than 0.25% lead may be used for the installation or repair of plumbing at any connection which provides water for human use.
- No solder or flux which contains more than 0.2% lead can be used for the installation or repair of plumbing at any connection which provides water for human use.

Seller must immediately remove or adequately isolate any potential cross-connections or other potential contamination hazards and, at the Seller's expense, must properly install, test, and maintain any backflow prevention device required by Buyer. Copies of all testing and maintenance records must be provided to Buyer upon request. If the Seller fails to comply with these restrictions, Buyer may, at its discretion, terminate this Purchase Order. Seller is liable for any expenses associated with the enforcement of these terms.
